WHY ARE THE FLOOD MAPS CHANGING?

Flood risk changes over time and mapping technology has improved. FEMA, in cooperation with the state of Oregon, Lane County, and local communities, is using newer data and technology to create updated flood maps that represent the risk of flooding in your community.

New maps help your community understand its flood risks. They can help you make informed decisions about protecting yourself from damage and loss.

WHAT DOES THIS MEAN FOR ME?

The new flood maps, officially known as Flood Insurance Rate Maps, identify areas of flood risk (high, moderate, low). They affect financial, planning, investment and development decisions.

Owners of structures in high-risk areas will be required to have flood insurance for loans taken through federally regulated or insured lenders. We encourage everyone to be aware of their flood risk and purchase flood insurance.

WHAT CAN I LEARN ABOUT MY RISK?

Our goal is to help residents understand the risks of living, or owning property, in or near a flood zone. We want you to know some steps you can take to protect your home and family. On the website, you can:

- Learn about the flood mapping process.
- Ask about the risk to your property and learn what happens next.
- Understand flood insurance implications.
- See how the map revision could affect your property and community.

Engineers, flood insurance specialists, local community contacts and other experts are available to answer questions and provide information.

The revised map is ready for public review and comment. You can view the maps and learn more about your risk here: bit.ly/clmapupdate.
